

Trauma-Informed Care in Early Childhood Regional Trainings

Understanding the role of trauma informed care in early childhood is vital to children and families. By becoming “trauma-informed” professionals will recognize that people have often experienced many different types of trauma. Those who have been traumatized benefit from support and understanding from those around them. This professional development opportunity is focused on educating communities and professionals about the long-lasting impact of trauma. A series of five, free trainings on Trauma-Informed Care in Early Childhood have been planned.
